Lab 2.4

Projections and Excerpts

Create a Projection class, Person, in the same package as your Repositories. Create three attributes (abstract methods);

- String getFirstName();
- String getSurname();
- String getId();

On the StudentRepository add the excerpt attribute i.e. @RepositoryRestResource(collectionResourceRel = "student", path = "enrollments", excerptProjection = Person.class)

Relaunch your Spring Boot Application, Navigate to http://localhost:8080/

You will be redirected to the HAL Explorer at http://localhost:8080/explorer/index.html#uri=/

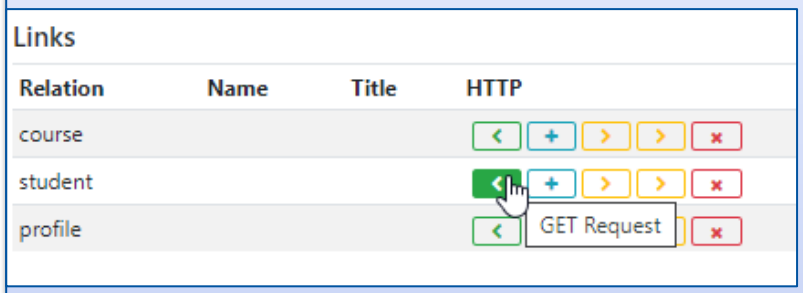
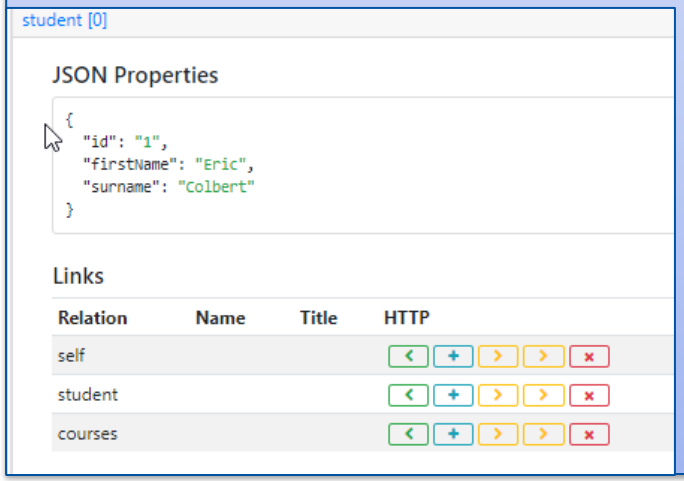
Lab 2.4

The Excerpt

Select Student "<" GET button, then from the resulting dialog click "Go"



Select the first student in the resulting list of links and you will see the projection



Select the student "<" GET, then the "Go" button in the resultant dialog, and you will see the student entity in full detail
